Product Update Bulletin

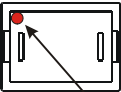

October 18, 2006

AH-IND-1 12V Indicator Light (@ Home Series)

American Technology Components, Inc. Elkhart, Indiana, is pleased to announce an upgrade to an existing product. The AH-IND-1, 12V Indicator Light, used with the @ Home Series line of products will now utilize a red Light Emitting Diode (LED) as the light source. While this enhancement improves the integrity of the component and the finished product care must be taken during installation to ensure proper connection. Please note the following:

LED Indicator Light

MUST OBSERVE PROPER POLARITY

LED's are polarity sensitive, you will not damage them if you hook it up backwards but they will not work. If your light does not work you may have no power, or no ground. If you have power and you have a ground it will work as long as it is connected properly. The power goes to the (+) lug and the ground goes to the (-) lug.

A **RED DOT** will indicate the (+) lug.

The illustration shows the (+) lug with the RED DOT located on the indicator bottom.
